

Parker Coming to the Best Plants Conference

Attendees can test drive groundbreaking Remote Manager app at Parker booth #408.

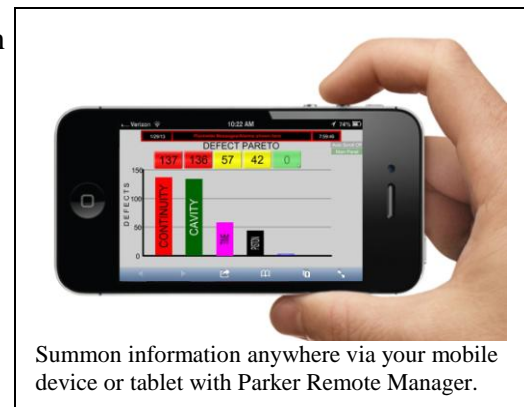

Last year's Best Plants conference was a big success for Parker, with a lot of booth traffic and plenty of excitement about Parker solutions. This year's event—which features outstanding North American manufacturing facilities and provides continuous-improvement practitioners the opportunity to learn from the best of the best—promises to be even better, thanks to new advances in “Information Anywhere” technology for the plant floor.

Among the solutions we'll be showcasing:

Parker Factory Display (PFD), which empowers workers with real-time, situational awareness for faster response to downs and non-conforming conditions on the factory floor, thus reducing the high cost of downtime and scrap. Whether presenting Andon displays, lean metrics, production status, OEE data, safety policies or employee announcements, PFD is much more than a “scoreboard” that simply displays text.

Remote Manager application, which delivers information anywhere to your mobile device, letting you monitor and control your PFD or Xpress system using your smart phone or tablet. This new, free app is available for download on Amazon, Google, and iTunes.

Interact Xpress Manager, which revolutionizes Level 1 HMI by allowing users to run, view, and edit applications in their web browser. This architecture is ideal for distributed applications where multiple HMIs are deployed on a single machine or across several remote stations.
