

## Meet the Economical, OEM-Style Servo Motor

**The new MPE is priced up to 30% lower than Parker's other motors.**

The new [MPE Series](#) is an economical servo motor that extends the [MPP motor family](#) to smaller frame sizes. The MPE is inventoried for immediate availability and is priced up to 30 percent lower than other motors offered by Parker Hannifin. Features include:

- Eight models covering three frame sizes of 40, 60 and 80mm
- Power rating of 50 to 1000 watts
- Segmented lamination design for high torque density
- High-performance neodymium magnets
- 2500-line encoder
- Cable options to plug and play with Parker drives as well as flying leads for other drives

“The MPE is perfect for high-volume applications where fast delivery and competitive pricing are required,” says Jeff Nazzaro, Parker’s gearhead and motor product manager. “This is accomplished through streamlined options and reduced complexity.”
