

Visualizing the Future of the Factory Floor

Parker Factory Display video now on YouTube.

Parker's Electromechanical Division is proud of the recent release of the next-generation Parker Factory Display (PFD). As a supplement to the launch, we have just released a YouTube video that describes some of the features of PFD and highlights an aspect of lean manufacturing called Original Equipment Effectiveness (OEE). The PFD offers unprecedented flexibility and impact for delivering critical messages to associates on the factory floor. Whether presenting Andon display-type information, lean metrics, production status, OEE data, safety policies or employee announcements, PFD is much more than a "scoreboard" that simply displays text -- it provides workers with real-time, situational awareness for faster response to downs and non-conforming conditions.

To watch the video, visit the "Video" section of the PFD product page on www.parkermotion.com or visit <http://www.youtube.com/watch?v=7U4URt3Ee14>
