

Pack Expo Demonstration

New video highlights Parker's Information Anywhere technology.

With today's demand for efficient machines and high throughput, coupled with the need for plants to run effectively, managers often need 24/7 access to real-time information, such as productivity levels and OEEs. Enter Parker's Information Anywhere technology. While visiting the recent Pack Expo show in Las Vegas, Lee Teschler, editor-in-chief of *Machine Design* magazine, spoke with Ben Furnish, market development manager, about how Parker can incorporate large display screens, mobile devices, touch screens and more to provide "information anywhere," from the factory floor to remote monitoring of automated machinery. Check out the video [here](#).
