

Turn to Parker When “You Gotta Move”

New video highlights Parker’s life science and analytics products.

We thought the 1933 Fred McDowell song “You Gotta Move” -- performed by Delta blues guitarist Austin “Walkin’ Cane” Charanghat -- was the perfect background to showcase Parker’s motion and control technologies for the *in vitro* diagnostics and imaging diagnostics markets.

You’ll find our electromechanical products moving hematology, DNA sequencing, auto sampling, liquid handling robots, digital pathology and many other applications.

From radiology and clinical lab instrumentation to point-of-care testing and analytical instrumentation, Parker gives life science customers world-class performance, quality and reliability.

Check out our toe-tapping video [here](#), and get movin’ with Parker!
